LoggerShutDown()

Synopsis

```
int LoggerShutDown()
```

Description

Frees the application internal data structure and terminates logger services.

`LoggerShutDown()` returns 0 on success and -1 on error.

Example Usage

This API function is failed safe which means when an error occurs the application can continue processing.

```
If( LoggerShutDown() == -1 )
{
     printf("Refer to additional error codes for further details\n");
}
```

Error Codes

Error codes are written to the following file, where the <cpid> is the application process id number:

- /tmp/<cpid>-LoggerAppsMessage.txt
- $LOGGER_HOME_PATH/LoggerOutput/<cpid>-LoggerAppsMessage.txt

Additional error codes detailed explanations are listed here.

1200	Environment variable LOGGER_HOME_PATH is not defined.
1201	Failed to create apps message file.
1202, 1005	Failed to get process executable name.
